

**Hello everyone! This week Team 1388 is finishing up the sixth week of build season. As usual we're a little behind but the mantra is always, "Don't worry, we're on 1388 time". Here are some updates on our progress.**

**Welding has finished with their production and has moved on to helping the fabrication and PR teams finish up their work.**

**Design, Fabrication and Electrical have been working long days getting the robot put together. Making new parts, prototyping the shooter and climbing mechanisms.**

**The strategy sub team has been working on our competition strategy and watching videos of practice matches. They have also organized a visit to Atascadero to meet with Team 973, the Greybots. They will be meeting the team, seeing their robot, practicing driving and talking strategy.**

**PR/Marketing has been busy making buttons for competition and the bumpers for the robot. They have also been creating a new button design, taking photos and writing our newsletter. Here's the latest button from PR, it should be a real smash at competition. As you can see our leads are Epic Characters.**

**The programming subteam has been fine-tuning the spinners on the robot, as well as working on the ball mechanism and different camera views for the driver.**

**Thank you for supporting Eagle Robotics, and stay tuned for more updates on the team! For more information, visit our website at [eaglerobotics.com](http://eaglerobotics.com), and follow us on Instagram [@eaglerobotics](https://www.instagram.com/eaglerobotics).**
