

## BUILDING PERFORMANCE TRAINING

Free Virtual Event  
Nov 16, 2021  
12:00 - 1:30 pm

# OUR CHANGING CLIMATE AND EVOLVING BUILDING PRACTICE

## Leveraging the Loading Order

This class will provide an overview of the changes occurring within the building sector and the driving forces behind them. We will discuss what these trends foretell for those of us in the industry, and an array of actual and potential solutions available to address the challenges we face.

### Learning Objectives:

- Identify key issues driving evolution within the building industry
- Describe policies and programs emerging to address these realities
- Explain the three pillars of high-performance, climate-responsive building practice
- Incorporate high-performance priorities and practice into a personal or professional action plan

**This training offers 1.5 AIA | HSW LU's**

## Meet the Instructors:

### Ann Edminster

Ann is a green building consultant based in Petaluma, laser-focused on decarbonizing homes and communities. Trained as an architect, she facilitates design teams, coaches other building practitioners, teaches, develops education programs, and rabble-rouses in the climate space in her spare time.

### Jay Gentry

Jay sits on the California Passive House Board of Directors, has a degree from UCLA's Anderson School of Management, 40+ years as a sales and marketing consultant, was a USAF pilot, and is committed to a sustainable, socially equitable, carbon-free, all-renewable future. He brings his unique background and passion for climate action to all his trainings.
